"Genome sequence of Yersinia pestis KIM.";

J. Bacteriol. 184:4601-4611(2002).

-1- FUNCTION: Catalyzes the acyloin condensation reaction between C atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yield 1-deoxy-D-xylulose-5-phosphate (Party) (By similarity).

-1- CATALYTIC ACTIVITY: Byruvate + D-glyceraldehyde 3-phosphate = 1-deoxy-D-xylulose 5-phosphate + CO(2).

-2- CATALTIC ACTIVITY: Byruvate + CO(2).

-3- COFACTOR: Binds 1 thiamine pyrophosphate per subunit (By similarity).

-3- Similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HAMAP: MF_00315; -; 1.

Nature 413:852-856(2001).

PUNCTION: Catalyzes the acyloin condensation reaction between atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yi 1-deoxy-D-xylulose-5-phosphate (DXP) (By similarity).

PORTALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = deoxy-D-xylulose 5-phosphate + CO(2).

Geoxy-D-xylulose 5-phosphate + CO(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        STRAIN-LT2 / SGSC1442 / ATCC 700720;

-i- FUNCTION: Catalyzes the acyloin condensation reaction between C
atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yield
1-deoxy-D-xylulose-5-phosphate (DXP) By similarity).
-i- CATALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = 1-
deoxy-D-xylulose-5-phosphate + CO(2).
                                                                                                                                                                                                                                                                         DXS_RALSO STANDARD; PRT; 636 AA.

-!- FUNCTION: Catalyzes the acyloin condensation reactoms 2 and 3 of pyruvate and glyceraldehyde 3-F1-deoxy-D-xylulose-5-phosphate (DXP)
-!- CATALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde deoxy-D-xylulose 5-phosphate + CO(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Roberts D., Allen E., Araujo R., Aparicio A., Chung E., Davis Duncan M., Federspiel N., Hyman R., Kalman S., Komp C., Kurdi Lew H., Lin D., Namath A., Oefner P., Schramm S., Davis R.W.; Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.

- PUNCTION: Catalyzes the acyloin condensation reaction between C atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to yield complete acyloise-5-phosphate (DXP) (By similarity).

- 1- CATALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = 1-

C decoy-D-xylulose-5-phosphate + CO(2).

- 1- COPACTOR: Binds 1 thiamine pyrophosphate per subunit (By

                                                                                             Nature 417:459-463(2002).

-i-FUNCTION: Catalyzes the acyloin condensation reaction between atoms 2 and 3 of pyruvate and glyceraldehyde 3-phosphate to y.

1-deoxy-D-xylulose-5-phosphate (NXP) (By similarity).

-i- CATALYTIC ACTIVITY: Pyruvate + D-glyceraldehyde 3-phosphate = deoxy-D-xylulose 5-phosphate + CO(2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   deoxyxylulose-5-phosphate synthase)
